

DHTMLX Scheduler .NET 3.1 Released with MVC5 Sample

Published 10/9/2014 by [Dmitry Sergeenko](#)

The recent release of [DHTMLX Scheduler .NET v.3.1 web control for ASP.NET](#) demonstrated improved functionality and new useful features.

Key improvements and features:

- metro-like “flat” skin that allows you to create an elegant event or booking calendar to meet your needs
- multisection events in multiple resource view that allows adding an event to several resources at a time
- resizable and easy-to-drag events in month view that simplifies events resizing by dragging them by edges, without opening a popup window
- events drag-and-drop between multiple schedulers (available for the Scheduler PRO version)
- grid view with enhanced customization capabilities
- highlighting the event position on the time-scale of the calendar while dragging the event
- enhanced export to PDF and PNG

The web control also got MVC5 sample that is included in the Scheduler .NET package. Also, check out this tutorial on how to create an [appointment calendar in ASP.NET MVC5](#).
