

# Client-side scripting : Developer tools

Published 12/10/2010 by [Shaitender Singh](#)

In this blog, I will share few useful developer tools for client side scripting . I believe any little help is very helpful in programming .

*Here is the list of developer tools:*

1. [JSFIDDLE](#) : Great tool to test JS/JQuery/YUI etc , this is online tool which mean you don't need to open VS or need VS in your system to test / make code snippet . JSFIDDLE have tons of option's and support almost all the scripts.
2. [The JSON Validator](#): JSONlint is also another useful tool. It is used to validate json string .
3. [JSbeautifier](#): JSbeautifier will reformat ugly, unreadable JavaScript, unpack scripts.

\*Please leave your valuable comments and if you are using any other tools which you want to share please leave comment I will edit and include it.

Many thanks!
