

Detect the http or https scheme in ASP.NET in server side code

Published 5/6/2013 by [Raghav Khunger](#)

To detect the http or https scheme in ASP.NET in server side code we can use [Uri.Scheme](#) property.

Below is the sample code to do the same:

```
string url = "https://www.yourwebsite.com/";  
Uri uri = new Uri(url);  
string scheme = uri.Scheme;  
Response.Write(scheme);
```

The output of above code is "https"
