

Referenced assembly TikaOnDotent does not have a strong name

Published 8/30/2013 by [Raghav Khunger](#)

I decided to work with the [TikaOnDotNet](#) project today. For that I downloaded the dlls via Nuget. But after downloading them I was getting the following compilation error:

Referenced assembly TikaOnDotent does not have a strong name

Solution:

The solution was to make it strong name. Since I was not having the source code for that dll I made the strong name with the steps mentioned in following article:

<http://codeasp.net/articles/-net/303/how-to-add-a-strong-name-to-an-existing-dll-or-assembly>
