

# Disable intellisense in SQL Server 2012

Published 10/1/2015 by [Raghav Khunger](#)

I am using SQL Prompt with my SQL Server 2012. The issue I face with it is that two separate intellisense modals come when I try to write anything in editor. The solution I came with that was to disable inbuilt intellisense of SQL Server 2012. Here is the setting which you need to disable it to do that:

Tools->Options->Text Editor->Transact-SQL->General->Auto list members

Just uncheck that checkbox
