

Passing multiple query string params from datalist hyperlink column

Published 12/31/2008 by [Vinay Gupta](#)

I have faced problem while passing the multiple query string parameters from the hyperlink column of datalist. I have spent time for this and ultimately I have found right one.

So I would like describe that how it can possible:

```
<asp:DataList ID="dlst1" runat="server" >
<ItemTemplate>

<a href='<%"page1.aspx?first=" + Eval("First") + "& second=" + Eval("Second")%' >View</a>

</ItemTemplate>
</asp:DataList>
```

So this will give the query string as: page1.aspx?first=69 & second=75

Hope this will help
