

# VS2015 Post-build event not firing

Published 10/29/2016 by [Raghav Khunger](#)

Here is the solution to fix it.

- In Visual Studio go to "Tools" >> "Options".
- Select "Projects and Solutions" option.
- Select "Build and Run".
- On right hand side pane uncheck "Only build startup projects and dependencies on Run" checkbox.

- Click "Ok" button to close the window.

After following the above steps you can see your post build events working on your project.
