

No valid “aps-environment” entitlement string found for application”

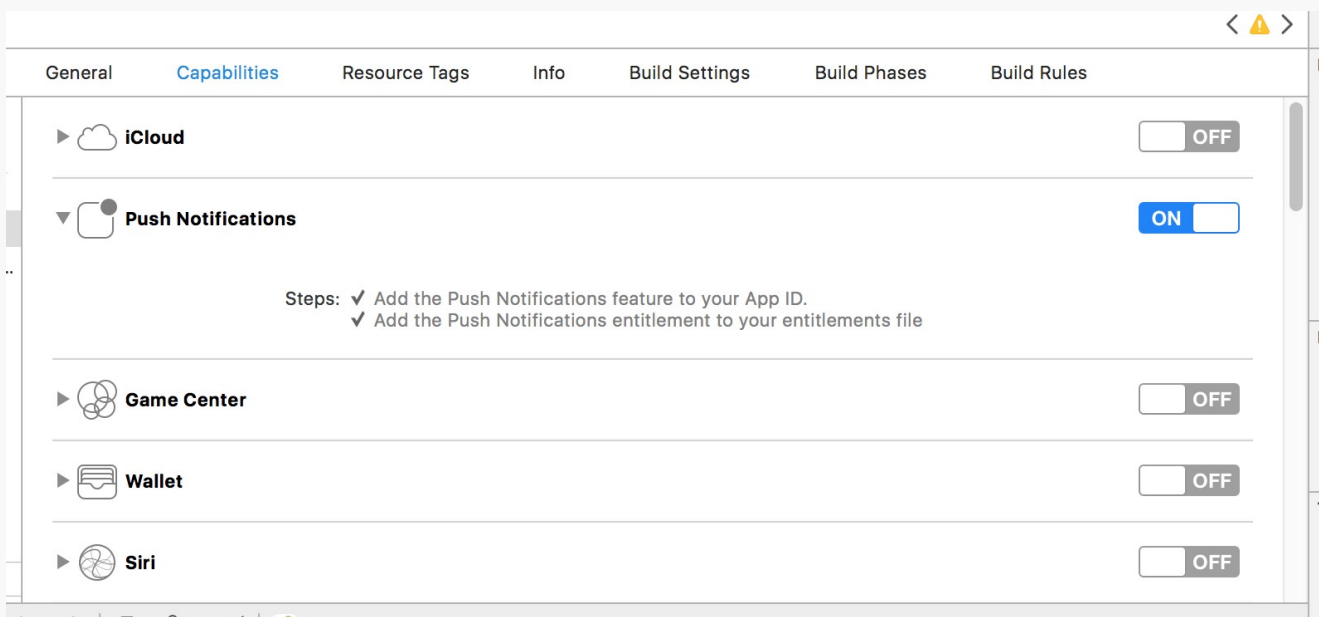

Published 9/25/2017 by [Raghav Khunger](#)

While running my application via Xcode to my iPhone I noticed I was getting the following error in the log:

no valid “aps-environment” entitlement string found for application” UserInfo={NSLocalizedString=“no valid “aps-environment” entitlement string found for application”}

I was able to fix this problem by enabling push notification capability.

Click on .xcodproj -> Capabilities -> Enable Push Notification.
