

# Uninstall a npm package installed globally

Published 1/25/2021 by [Raghav Khunger](#)

If you are looking for the command for uninstalling a npm package which was earlier installed using `npm install -g` command then you can use the following command:

```
npm uninstall -g <YourPackageName>
```

For example, If you installed a package say "create-react-app" the uninstall global command will be

```
npm uninstall -g create-react-app
```
