

# You have not concluded your merge (merge\_head exists)

Published 18 days ago by [Raghav Khunger](#)

The problem for the "You have not concluded your merge (merge\_head exists)" message is that previous pull was failed to merge automatically and went into conflicted state.

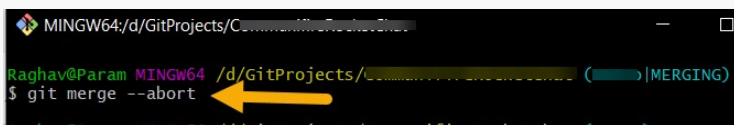

The solution is to undo the merge and pull again.

Open GitBash

and command the git to abort the merge

```
git merge --abort
```

After that git pull will work fine:

```
* branch axero -> FETCH_HEAD
Already up to date.
Done
Press Enter or Esc to close console...[]
```
